

# Ice Melter

## Effective to -25°C (-13°F)

*Anchor* ice melting products are the safer way to go when dealing with dangerous conditions caused by ice and snow in walking, parking and loading areas on your premises.

*Anchor* Ice Melter consists of a naturally occurring blend of minerals and chlorides. Snow pack and ice will begin to dissolve immediately following application. *Anchor* Ice Melter breaks the bond between the ice and concrete or pavement. This all natural product's low alkalinity makes it less harmful to vegetation when used as directed.

### Recommendations

**Application:** For best results, remove existing loose snow and slush from area to be treated prior to application of *Anchor* Ice Melter. Evenly sprinkle *Anchor* Ice Melter on desired surfaces. Melting should begin immediately and will continue longer than standard rock salt products. Once snow and ice have been melted, shovel off the slush. Thick accumulations may require additional applications. To ensure even and complete coverage, use a broadcast spreader.

**Notice:** Concrete surfaces which have been poorly constructed, are not air entrained, or of sufficient age, may become damaged through prolonged application. To minimize this effect, remove melted ice and snow soon after application. This product has no adverse effect on asphalt. Not recommended for concrete that is less than two (2) years old, or that was not properly mixed, finished or cured. May be harmful when used excessively or repeatedly applied.

### Physical Properties

*Appearance:* Peach

*Odour:* None

**EFFECTIVE TO -25°C (-13°F)**

### ANCHOR ICE MELTER

- Consists of a complex blend of minerals and chlorides
- Peach coloring assures visible, complete coverage and helps prevent over-application
- Environmentally-friendly
- 20kg bag. 56 bags per pallet

Code	Size	Special notes
S35061	20 kg bag	Ready to use
